PROJECTS

Mobile Application- Puulse

Description: Developed a system that allows employees to choose their salary payment schedule (daily, weekly, or monthly), with requests sent to senior management for approval. Upon approval, payments are processed according to the selected frequency.

Responsibilities

- Built RESTful APIs to handle requests between the client-side (front-end) and database.
- Performed Unit Testing.
- Integrated third-party services and APIs, such as payment gateways or external data sources.
- Deployed and maintain back-end services on cloud platform AWS.
- Generated technical progress reports for clients, keeping them updated on development milestones.
- Developed and use middleware for handling tasks.
- Used Git to track changes and collaborate with other developers on the back-end code.

Technology used for Backend: NodeJs, AWS, MSSQL, Payment Integration.

Web application, Mobile Application- ExplicitCars

Description: It is a web and mobile application that allows users to buy and sell cars easily. It provides features for listing, browsing, and secure transactions, streamlining the car trading process.

Responsibilities
- Designed flowcharts and API structures.
- Conducted unit testing to ensure functionality.
- Managed three distinct roles: Buyer, Seller, and Super Admin.

Technology used for Backend: NodeJs, AWS, PostgreSQL, third party API's

Web Based Application- Enrich CRM

Description: Developed Enrich CRM, a customer relationship management system that streamlines client interactions, tracks sales activities, and automates workflow processes. The project involved creating intuitive interfaces and integrating features to enhance user engagement and data management.

Responsibilities
- Built RESTful APIs to handle requests between the client-side (front-end) and database.
- Performed Unit Testing.
- Managed Hubspot API's

Technology used for Backend: NodeJs, AWS, MYSQL and Hubspot.

Mobile Application- The Mark academy

Description: The Mark Academy is an educational initiative focused on developing essential skills in students for academic and professional success. It offers workshops, mentorship programs, and academic support to enhance critical thinking, communication, and career readiness. The academy also promotes personal growth and community engagement, helping students build confidence and prepare for their future careers.

Responsibilities
- Built RESTful APIs to handle requests between the client-side (front-end) and database.
- Performed Unit Testing.

Technology used for Backend: NodeJs, AWS, PostgreSQL and third party API's like Twilio and Sandgrid.
